HGC PROCEDURE.

The following is laid down as an entirety of processing to be done in the HGC in Washington. No other processes or variations are allowed.

GOAL: Operating Thetan.
DEFINITION: An Operating Thetan is one who can be knowingly at Cause over Life, Matter, Energy, Space and Time.

CCHO in brief, find auditor, find pc, find auditing room, clear help and goals. BUT IN THE MAIN HANDLE THE PT PROBLEM IF IT EXISTS. IF IT DOESN'T EXIST do CCH O briefly and quickly and get on with the session.

It will be noted that giving pc's attention to auditing room or environment can turn on a somatic after three or four commands. After one command of "Have you got an auditing room," this becaomes a process called LOCATIONAL. If Locational turns on a somatic it must be run until somatic is flat. Therefore the auditor has no business attempting locational or getting the pc involved unless he intends to do something about it.

PRESENT TIME PROBLEM

The pc is put on an E-Meter before PT Problem is discussed. When the E-Meter has been adjusted(one third of a dial surge when pc squeezes cans) the auditor asks if the pc has a present time problem. After a little discussion of this, the needle may surge. If it does the auditor locates the pt problem's most intimate terminal and runs (with the pc still holding the cans) "Invent something worse than (indicated terminal)" until the problem flattens out on the dial. The auditor can ask for andrun ahother pt problem or even three or four but always flattening down the surge of the needle. IF THE PC IS 50% below the center line of the APA it is not safe to run "Invent". Instead, without scouting around invent but knowing the graph in the first place, simply two way comms the problem and runs Locational until the problem flattens out on the needle. The auditor does not begin with invent and then change his mind and run locational. It is an either or. The auditor starts with "Invent" or he starts with Locational and whichever he does he does not change. IF LOCATIONAL TURNS ON A SOMATIC IT MUST BE RUN UNTIL LOCATIONAL NO LONGER TURNS ON SOMATICS.
Once the pt problem is flat the auditor puts away the E-Meter.

S-C-S Steps

S-C-S begins with 8c of any kind. If 8c turns on a somatic it runs until it no longer turns on somatics. 8c is run formal or tone 40.
Start is then run as per 1956.
Change is then run as per 1956.
Stop is then run as per 1956.
If each of these is flattened in turn it does not mean that S-C-S is flat. It means only that Start is probably unflattened. Thus one again runs Start after Stop, runs 6hange after Start, Stop after Change until none of the three unflatten the others.
More 8c can be run. There is no error in liberally running 8c which is, after all, a more complicated Locational of a Short Spotting sort.

SPOTTING STEPS

Spotting itself is a broad process. Locational is only one of many spotting processes. Spotting spots in the past, in space, in the present, Short Spotting(Locational done up close) are all effective.
SPOTTING DEPENDS FOR ITS WORKABILITY ON THE DISLIKE OF A THETAN OF BEING LOCATED. IT RUNS BEST, of course, WITH THE THETAN AT CAUSE DOING TO SPOTTING.
Connectedness is the basic process on ASSOCIATION of Theta with Mest. All forms and kinds of association including being caught in traps prone to become identifications as in Dianetics. Connectedness puts the thetan at cause in making the Mest (or people when run outsie) connect with him. The command is "Get the idea of making (indicated object) connect with you." The auditor points. The worse off a person is the less reality they have on far objects.
Havingness is a complicated Connectedness. Also a permissive one. Thus Trio is above connectedness and may be used when Connectedness is flat.
