Reviewing Week's Profiles

In clearing pcs it is necessary for the auditor to cause something.

Abandon any idea of running significant objects ever.
Always run non-significant objects.

Free the needle before you run Step 6 when needle is stuck.
Two-way Comm and Str Wire will do it.

Totally clear up a field before running step 6. A field is cleared by running repair of havingness on a terminal like the field. Don't go running pcs on 6 who "Think they see a rock up" or "who have an 'idea' one is there."

L. Ron Hubbard
