Reviewing Week's Profiles

In clearing pcs it is necessary for the auditor to cause something.

Abandon any ifea of running significant objects ever. Always tun non-significant objects.

Free the needle before you run Step 6 when needle is stuck. Two-way Comm and Str Wire will do it.

Totally clear up a field before running step 6. A field is cleared by running repair of havingbess on a terminal like the field. Don't go running pcs on 6 who "think" they see a mock up" or "who have an 'idea' one is there."
