A Pair of Processes

Now and then I overhaul some old processes once in use and see what can
be done to make it work.

Op Pro by Dup and Forgetting are a pair that recently showed up as hav-
ing a possible specific value - i.e. to create a specific effect upon a spe-
cific difficulty.

EvidentlyAdmiration and Critical are a dichotomy. Maxine Kozak suggests
that Duplication is Admitation. From this I looked over Critical on the APA
(OCA) profile and saw that the low critical might be influenced by Op Pro by
Dup. A test should be made of this.

The other process is less nebulous in action. The specific for a bad
memory is Forgettin run in Brackets. You will ordinarily find an automaticity
of forgetting when you ask"Recall something you wouldn't mind other people
forgetting." This is a "bad memory". Nothing like a good conscience to retain
a good memory.

The commands of Forgetting would be a 6 way bracket.

Recall (or think of) something you wouldn't mend
        (1) Forgetting yourself
        (2) Another person forgetting
        (3) Forgetting about another
        (4) Another forgetting about you
        (5) Other people forgetting
        (6) Another person forgetting about another person

Each command is cleared. The commands are tun in sequence rather than
repetition.

This is a low scale process. Goes lower than "Not know" but graduates
into it.

This is a basic on unknowns and fields of whatever kind.

                                        L. Ron Hubbard
