A Pair of Processes

Now and then I overhaul some old process once in use and see what can be done to make it work.

Op Pro by Dup and Forgetting are a pair that recently showed up as having a possible specific value - i.e. to create a specific effect upon a specific difficulty.

Evidently Admiration and Critical are a dichotomy. Maxine Kozak suggests that Duplication is Admiration. From this I looked over Critical on the APA (OCA) profile and saw that the low critical might be influenced by Op Pro by Dup. A test should be made of this.

The other process is less nebulous in action. The specific for a bad memory is Forgetting run in Brackets. You will ordinarily find an automaticity of forgetting when you ask "Recall something you wouldn't mind other people forgetting." This is a "bad memory". Nothing like a good conscience to retain a good memory.

The commands of Forgetting would be a 6 way bracket.

Recall (or think of) something you wouldn't mind

- (1) Forgetting yourself
- (2) Another person forgetting
- (3) Forgetting about another
- (4) Another forgetting about you
- (5) Other people forgetting
- (6) Another person forgetting about another person.

Each command is cleared. The commands are run in sequence rather than repetition.

This is a low scale process. Goes lower than "Not know" but graduates into it.

This is a basic on unknowns and fields of whatever kind.
