A Pair of Processes

Now and then I overhaul some old processes once in use and see what can be done to make it work.

Op Pro by Dup and Forgetting are a pair that recently showed up as having a possible specific value - i.e. to create a specific effect upon a specific difficulty.

EvidentlyAdmiration and Critical are a dichotomy, Maxine Kozak suggests that Øuplication is Admitation. From this I looked over Critical on the APA (OCA) profile and saw that the low critical might be influenced by Op Pro by Dup. A test should be made of this.

The other process is less nebulous in action, The specific for a bad memory is Forgettin run in Brackets. You will ordinarily find an automaticity of forgetting when you ask"Recall something you wouldn't mind other people forgetting." This is a "bad memory", Nothing like a good conscience to retain a good memory.

The commands of Forgetting would be a 6 way bracket,

Recall (or think of) something you wouldn't mend
        (1) Forgetting yourself
        (2) Another person forgetting
        (3) Forgetting about another
        (4) Another forgetting about you
        (5) Other people forgetting
        (6) Another person forgetting about another person

Each command is cleared. The commands are tun in sequence rather than repetition.

This is a low scale process. Goes lower than "Not know" but graduates into it.

This is a basic on unknowns and fields of whatever kind.
