HCO BULLETIN OF FEBRUARY 24, 1959
Issued in Washington

Technical Bulletin

It is not only unreasonable but impossible to run engrams or higher processes than Selected Persons Overts Withhold on people who have low reality and low responsibility. Selected Persons Overts Withhold raises both reality and responsibility and some of the cases around will only start to respond after four to five weeks of Selected Persons Overts Withhold Straightwire. But the main point is that they do - repeat, do respond.

We have got it made in Selected Persons Overt Withhold Straightwire. Let's not loose it.

Selected Persons Overt Withhold Straightwire

Select a person (terminal) that is real to the preclear.

Run "Recall something you have done to _____" (that terminal) and "Recall something you have withheld from _____" (that terminal) alternately.
(One question after the other)

Wherever the person has a misidentification or a fixated terminal on any dynamic, that terminal should be selected out and flattened by Selected Persons Overt Straightwire. We will be rid of these unresponsible cases.

Do not graduate into General Overts until Selected Persons Overt Withhold Straightwire is flat. When is Selected Persons Overt Withhold Straightwire flat? It is flat when the preclear has come up tone through shame, blame, regret, and a recognition of his own failures and preferably 4.0 on the tone scale as per "Science of Survival".

Minimise the two-way communication, clean up present time problem with the same process, using the terminals involved in the present time problem, and if in doubt MUZZLE the auditor.
