HCO BULLETIN OF JULY 26, 1959

H.G.C. REGIMEN

The lack of results in HGC are probably due to the restimulative nature of Communication Processes, a phenomenon we have noted on ACC's.

Therefore, I am giving you this regime which I want you to very thoroughly enforce so that we can regain the results and therefore income and dissemination on the HGC.

These processes were first evolved by me in 1956 to process the personnel of a large London company so that they would get uniform results and would not be telling one another different processes during work. It is therefore amongst the first packages to be "used on anybody". You have all the data on this, I am sure. It is in the pocket paperback on Control. Switch all PCs to this and we'll have a happier set of auditors and better results.

Run Psychos on CCH 1, 2, 3, 4.

Switch all other cases except the acutely ill (on which you should run Communication Process to the ill body part) to S-C-S and Connectedness. When these are flat run the PC for awhile on the following Comm process : "From where could you communicate to a person with difficulties." When PC seems to be flatish on this, return to S-C-S and Connectedness.

Let's increase those results.

L. RON HUBBARD
