HCO BULLETIN OF AUGUST 5, 1959

Processing Gains by a  
Mentally Retarded Child

Here is an extract of a letter written by Eileen Russell to Ron:

"I've just completed 50 hours processing on one of the so-called mentally re-  
tarded children of a group from a hospital to which Ray Kemp is in contact.  
My pc is 10 years old and her condition before processing was that of a brok-  
en record shouting engramic phrases repeatedly, her body jumping in sudden mo-  
tion from place to place, nervous and excited, gripping and pinching one's  
flesh on contact, no attention.

"Under Ray's guidance, I ran the following processes -

CCH 1a and 1b for 10 hours.

S-C-S - start 10 hours - change 10 hours.

8C for 22 hours.

Result - child composed.

No engramic phrases.

Attention increased markedly.

Child consciously acknowledging me.

Body movements easy and moderately in motion.

Obeys commands on own decision with attention happily.

"This has been my first real processing of a child, so I'm naturally  
rather pleased."
