

HCO BULLETIN OF AUGUST 18, 1960

VITAL INFORMATION

HAVING developed now a process package which makes Mest Clears, Theta Clears and OTs without further special uses on many cases, I hasten to send you the data and ask that you yourself at once get audited on it ~~and make it your own~~ and audit those persons who are surest and best around you in order to obtain a 'control of areas' with the increased ability.

Nothing in this process discards the main line of theory of Dianetics and Scientology but since results can be obtained so weftly with it, it must be asked that persons uneducated in Scientology must not be run too far on it, as they will obtain high levels of action without any understanding which would be an overt against them. In short, do not complete this process on any preclear beyond the level of Mest Clear unless the preclear has been sent for a course. This will save considerable upset and instability in the long run. It is a technical fact having nothing to do with economics of Central Organizations.

The only overt we can do is to fail to disseminate correct data. We can refuse to process without any overt occurring. But we cannot fail to disseminate without an overt. Study it out and yo'll see it's true.

I will not give you much theory on this at this writing beyond a statement that all apparent dynamics on people are inverted from their sixth dynamic and that the theory of confusion and the stable datum is paramount here.

In the process we remove the confusion and permit the preclear to release the various terminals and ideas.

Later assessment and the running of terminals is probably needful.

The basic process was looked for first in 1951. There was a lecture on it called 'Motion and Emotion' and a talk about the 'governor' of a preclears speed of advance, Since then I have had to search very hard and it has taken eight years to match up processes to hit at this.

I have now done this.

The rundown is as follows, every session:

Pre-session
Model Session
Help
Alternate Confront
Havingness

The thing on which Help is run is MOTION. The commands are these:

'What motion have you helped?'
'What motion have you not helped?'

Do not run 'What motion could you help' or any invent process. Help, being a responsibility process, gives us the only practical way to get the preclear to face a non-terminal like Motion.

This is Mest Clear Route, Theta Clear Route, OT Route.

If the preclear runs to flat meter, assess for a terminal, run that terminal flat, then run more motion as above exactly. The assessment is the most difficult part. If the assessment is right one gets a fast run, if wrong, it takes ages.

But start now on Motion.

We're off the launching pad. Glad you're with us.
