FORMULA 13

Tech Hats
Staff Auditors
D. of P.

I am **having** very good luck undercutting beginning or old unmoving cases in Scientology by using a new formula called Formula 13. This consists of running failed help as the **confront** process and O/W on specific present time terminals as the **havingness** process.

Failed Help is almost the lowest rung of help processes. It is run with the commands "Who have you failed to help?" "What have you failed to help?" alternated. There's a lower help process than this. That is "Who have you intended not to help?" "Who have you helped?", but this is not Formula 13.

Overt withhold is a havingness process. This comes about since havingness is duplication and one will not care to duplicate what he has overts against. Therefore the source of low havingness is overts against people and mest. It might be commented that overts against mest are more important than against people in the reduction of havingness but this again is not Formula 13.

The essence of running Formula 13 is running in model session form a little failed help with O/W on a **present time** terminal. It is done in this fashion. One opens the session, even uses **Precession I** if needed, does rudiments using O/W to clear PTPs and ARC Breaks, and then does about ten minutes of failed help. Then he makes an **assessment** from a prepared list of people the pc knows in PT, and assesses for a needle fall on one of these. Then O/W is run on that specific person until the fall vanishes regardless of T A position, and returns to failed help for ten minutes or so, then reassesses for a PT terminal from his **Mst** until he finds one that falls, and flattens O/W on this, and then runs failed help and so on.

It will be found that this is the best case undercutter for general use I have so far developed. It is generally recommended and urged for all HGC's.

Formula 13 is followed by finding the havingness process then the confront process, and then Regimen Three is used, assessing for a general terminal and with the havingness and confront process running alternate help on the general terminal.
