

IMPORTANT DATA ON GOALS SOP.

It is vital to know that cases run on Goals SOP or the Pre-Havingness Scale may slump between sessions and become mis-emotional even out of session until the scale is flat - flat - flat on any assessed terminal.

It is also important to know that a case run on the Pre-Havingness Scale in such a way as to leave a level unflat may hang-fire thereafter and will move only when that process is completed.

This scale is hot and fast, But its very workability can unstabilize cases during an intensive,

Use the scale. But use it intelligently. Do not permit it to be used by untrained unsupervised Auditors.

Flatten Terminals

Flatten every level started, get tone arm and needle to a stick or no action before assessing another level for the terminal.

It is all right to alternate two levels, running the one assessed and the one below, back and forth. But do not leave either level unflat before assessing again.

When is a Goals Terminal Flat?

An assessed terminal taken from the heaviest reacting goal of the pc must be run reassessed and run at various levels of the scale until the goal terminal has no reaction on a cranked up sensitivity needle for any level of the Pre-Havingness Scale. If a reaction is found, run it off and check again.

Don't quit a terminal because the pc wants to. Quit it only when meter has no reaction.

Use the Pre-Havingness Scale.

Don't be disturbed by the mis-emotion of a pc during or between sessions.

Run any goals terminal you assess flat on all levels of the scale before going on to assess new goals.
