NEW ASSESSMENT SCALE

I have developed a new assessment scale which takes in most possible formulas and regimens.

The scale and its use follow:

The Pre-Havingness Scale

Havingness
Failed Havingness
Interest
Failed Interest
Communication
Failed Communication
Control
Failed Control
Help
Failed Help
Overts
Failed Overts
Witholds
Failed Witholds
Importance
Failed Importance
Leave
Failed Leave
Protect
Failed Protect
Abandon
Failed Abandon
Inverted Help
Inverted Control
Inverted Communication
Inverted Interest
Obsessive Can't Have

This scale may have other points I have not located yet.

Its Use

The use of the Havingness Scale in auditing is as follows:

Havingness is the make-break point of a case. Before havingness can be tested for all heavy areas on the lower part of the scale must be flat.

The most elementary use of the scale and the one recommended at this time is to assess the points on the scale upwards until a fall is observed and then to run this fall out. Then to assess again from the bottom until a fall is observed and run it out.

All auditing to be done in Model Session form. The assessment follows either after the rudiments or after a discovered button has been flattened.

The upper nine points of the scale are best run as Regimens (from Help upwards).

I have not accumulated cases using this type of approach on this scale but I feel by past experience, that it should catch even those cases that "failed help" hasn't reached.

I do not know how long it should take to flatten one button on this scale. I would guess, from failed help down, that it would take a few hours per button.

Probably this will develop into running pairs as in all formulas but until it is established how that should be done, the above system should be used.
