## AUXILIARY PRE-HAVE 3D SCALE.

For immediate assessment use on running 3D terminals. Do NOT use early scales for 3D assessment.

If you run out of levels, use secondary scales or Hartrampff's Vocabularies.

Do not abandon search for a level if the TA is high.

<u>Always</u> run a level to a stuck TA and needle. Never overrun a stuck TA by more than 20 minutes.

Do not leave a level that still shows TA action and needle movement. Do not consider the twitching of the otherwise motionless needle, when 5D items or the leve is mentioned, a still moving needle.

Later in runs after many levels flat, when TA will no longer stick (or move) on levels, still look for a new level that will produce TA motion.
