HCO BULLETIN OF JULY 21, 1962

RUDIMENTS REPETITIVE OR FAST

(From Sthil Cable, July 23, 1962)

The Instant Read can occur anywhere within the last word of the question or when the Thought Major has been anticipated by the pre-clear and must be taken up by the auditor. This is not a prior read. Preclears poorly in session being handled by auditors with indifferent TR. One anticipate the Instant Read reactively as they are under own control. Such a read occurs into the body of the last meaningful word in the question. It never occurs latent.

In other words, all reads occurring when the Major Thought has been received by the pre-clear must be cleaned. This does not mean all needle reactions occurring while question is being asked must be cleaned, but it does mean that the Instant Read is often to be found before the last meaningful word is spoken fully and it is catastrophe not to take it up and clean it.

Goals and Items are however read only when the read occurs exactly at the end of the last word.

This will give you cleaner sessions and smoother needles.
