HCO BULLETIN OF NOVEMBER 11, AD12

3GAXX
STRAIGHTENING UP 3GAXX CASES

(This is an interim HCO Bulletin issued while the Main HCO Bulletin on Step 4 of 3 - 21 is in composition.)

All cases being run on Dynamic Assessment must at once begin the following actions to speed progress.

This applies to cases both before and after the goal has been found.

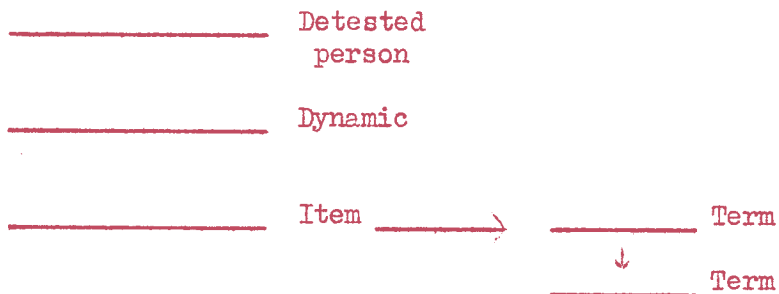

Any slowdown of a case in running stems from failure to oppterm every Reliable Item, when found.

Cases develop a "phantom Rock Slam" when this is not done. Further, the pc is to a greater or lesser degree puzzled as to "what was the package."

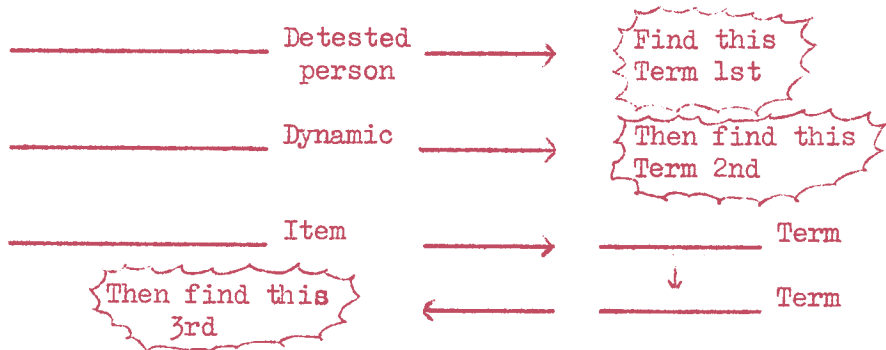

Do the following:

- (1) Make a complete Line Plot for your pc (HCO B November 8, AD12) and get your already found Terms and Oppters in the right places and every Reliable Item noted with R.I.
- (2) Oppterm every Reliable Item found to date, whether in searching for or listing out the goal.
- (3) Represent every R.I. which still has an RS after being opptermed.

Your pc's line plot probably currently looks like this:

Make it so it looks like this:

In short, fill in all the blanks where no oppterming was done before.

See HCO Bulletin November 8, AD12 for all details of how it's done.

Your pc's attention is hung up where you haven't made a pair. The GPM is full of pairs of terms and oppters.

The rule is on all future Items: Oppose every Reliable Item. Represent every one that still RSs when the oppterm or Term matching it is found.
