HCO BULLETIN OF DECEMBER 6, AD.12

R2-10 R2-12 3 GAXX
DATA, THE ZERO A STEPS AND PURPOSE
OF PROCESSES

RULE: WHEN AN RSING ITEM IS FOUND ON LIST ONE THE SCIENTOLOGY LIST IT MUST BE OPPOSED.

COROLLARY: WHEN AN RSING ITEM IS FOUND ON LIST ONE AND IS NOT OPPOSED THE CASE WILL TEND THEREAFTER TO PRODUCE NO ROCKSLAMMING LISTS.

The Rule and Corollary are so much fact that if the auditor fails to oppose an RSing Item on List One and only represents it, the case will produce dead horses thereafter.

This is true mainly for the Scientology List. As Scientology is what is helping the pc, having a GPM type present time problem about it will prevent any further case gain.

On four cases now, where no RS was found on List One, The Scientology List, although DR Items were found and represented, no RSes occurred on the lists.

Thereafter the history of these cases was gone into, older auditor reports were examined and it was found that in each of these cases during a Security Check that an Item like "Scientology" or "Auditor" or "LRH" had RSed. The case then fully suppressed it and it did not come up on a new assessment of the Scientology List.

As soon as these Items were opposed RSes turned back on on the Lists and all went well thereafter.

Further, the nattery nature of the pc was extreme until this was done.

So it can be concluded that a BIG 2-10 or 2-12 goof is to fail to oppose Items that RS on List One, the Scientology List.

It is an INDICATOR that if a pc is very nattery or upset on 2-10 or 2-12, it is probable that somebody overlooked and didn't oppose something that RSed on List One.

It is an Indicator that if a pc is producing Dead Horses on listing, somebody overlooked and failed to oppose an RSing Item on List One or that the pc should be run on List Zero-One or List Zero-Two.

A common form of missing an RSing Item on a represent and being unable to make a list nullable, is that the Item from which the represent list was taken, being unburdened by the listing, now begins to RS and becomes the Reliable Item.

Rule: When having difficulty getting a clean needle on a represent list at the end of listing, and before nulling, always Tiger Drill briefly the Item the list is coming from to see if that Item is now RSing. If it is, don't bother to null the represent list just made. Do an oppose list on the original item.

Example: List One Item found - The Church. Give a DR. A represent list is written 200 or more Items. Meter still rough. Check The Church. It will occasionally be found to be RSing and is therefore taken as the R.I. and now should be opposed. The represent list made is abandoned.

In trying to run R2-12 on a first goal clear, use R2-10 instead and use any tick an Item gives instead of an RS in order to oppose that Item. A persistent tick or reaction - RS on a 1st goal clear.

Contd./

ZERO LIST QUESTIONS
OR R2-12

Where a pc is producing Dead Horses on List One, there are Zero Lists that can be used.

The procedure is this:

R2-Step 02 -

Check up on the pc's record to see if an RS was ever observed on Scientology, the orgs, auditor, LRH and if so oppose that Item at once.

R2-Step 01 - Lists OA

If a Dead Horse is produced by (1) above, then assess the following for largest read on the meter:

List OA0	Keep Hidden
List OA1	Be Reasonable About
List OA2	Rather not think about
List OA3	Rather not know about
List OA4	Ignore
List OA5	Avoid
List OA6	Stay away from
List OA7	Not Communicate with
List OA8	Hold off
List OA9	Rather not have appear
List OA10	Have to help
List OA11	Fail to help
List OA12	Dislike
List OA13	Fight
List OA14	Advise others to Attack
List OA15	Attack
List OA16	Do away with

Then use the result (largest read or RS) in the blank of the following question:

"In present time who or what would you _____"

Step 1-OA:

Make your first List by asking the pc the question formed in (02).

Proceed then with the usual remaining steps of R2-12 (or R2-10).

Note: These steps do not replace the 1-A series in the original issue. The Zero A series as given above are all prior to List One, The Scientology List, which must be done after the Zero A series.

The Zero A series can be assessed several times for new lists.

But remember, the pc who has a hot List One (The Scientology List) will make minimal progress on Routine 2-12.

On a pc newly on R2-12 or 2-10, if an RS was missed on List One, and nobody can discover if this pc ever RSeD on it, and List One gives two Dead Horses in a row, fall back on the Zero A List. Then after two or three packages are found from it, re-assess List One. The List One RS will have been caught by the Zero A lists or will be there on List One again.

"Never RSing" PCs.

If a pc cannot be made to RS on Repr sent Lists taken from List One, then List One was already RSing or the Zero A List must be resorted to.

There are no never RSing PCs. All pcs RS. Those that are mediumly bad off RS very easily. Those that are way down RS less easily. Those that are in fair shape RS well but the RS is rather moderate (less wide) and their RS turns on every time an RSing Item is said to them. The Bad off PC's RS suppresses very easily. The mediumly bad off pc has a wide, wild frantic RS that sometimes RSeS within the RS as it slashes.

Contd./

The progress of a pc can be marked by this cycle:

Horrible Shape = Hard to find RS

Mediumly Bad off = Frantic wide, sporadic RSs easily suppressed.

Not too bad = Easy to find RS turns on easily on auditor's statement of Item. Mediumly wide.

Fair shape = Easy to find, easy to turn on, doesn't suppress, fairly narrow and regular.

Good shape = Very easy to find, very easy to turn on by command, blows on cognition.

A pc in horrible shape goes through all these phases. Any other case on the scale moves up.

The GPM RS is the pathway through the GPM. Any Item that RSeS was part of the GPM and has another Item in opposition to it.

Thus, you could, in theory, clear a pc by just finding Items on and on.

However, the goal sooner or later presents itself, usually in the form of a Rocket Reading Terminal. By listing what goal that terminal may have one gets a goals list that can be assessed. (The RR Item still must also be opposed).

But wrong goals are so deadly and R2-12 Items are so beneficial when found that a Class II Auditor takes his pc's health and life in his hands to fool about with goals. Leave that to Class IVs and go on finding Items.

Rocket Reads VS RSeS

The Rocket Read is superior in value to an RS. The RS is superior in value to a DR. A DR is superior in value to a fall.

A beginning RS is sometimes mistaken for a Rocket Read. But it won't repeat itself. And a Rocket Read always goes to the right with a fast spurt which rapidly decays. The slash of an RS is all of the same velocity and doesn't decay, it just ceases.

The Rocket Read is the Read of the goal or the Rock itself.

The RS is the read of the Rock VS the Opposition Rock and every pair above them on the cycle of the GPM. It marks the path to the Rock.

Just below the Rock lies the pc's goal.

The ROCK SLAM CHANNEL is the pathway through the pairs of Items that compose a cycle of the GPM and lead to the Rock and goal.

The Rock Slam marks the path of Interest of the pc. RS = Interest = Cognitions. No RS = No Cognitions.

Below the 1st Goal is a whole new undisclosed GPM. The 1st goal clears off a cycle of the GPM. The second goal a 2nd cycle, earlier and stronger. And so on. This is therefore the road to Theta Clear and Operating Thetan.

But the first goal is too heavily overburdened to be found easily or run on the vast majority of cases. Therefore R2-12 is needed and 3GAXX.

PURPOSE OF PROCESSES

The target of R2-10 is fast result in the pc and greater reality for the auditor.

The target of R2-12 are the packages in Present Time which bend the GPM out of shape and give the pc PTPs and Hidden Standards.

The target of 3GAXX is Items on which goals lists can be compiled and unburdening.

The target of Routine 3-21 is clear, Theta Clear and Operating Thetan. Second goals are easily found by R3-21 alone without Step 4A (3GAXX).

Cont. /

This then is the whole road from Homo Sapiens to Home Novis to Operating Thetan.

It requires only precision and the auditing skill now taught on the Saint Hill Special Briefing Course.
