HCO BULLETIN OF 21 JANUARY 1966

## SEARCH AND DISCOVERY (ETHICS TYPE CASES, PTSs)

## S & D ERRORS (Handling PTSs with S & D)

When you have a failed Search and Discovery, the following are incorrect or have been omitted:

- Incorrect item (errors in listing or assessment, over or under listing, bad metering, poor question).
- 2. Person has not actually been made to disconnect from the SP by declaration in writing.
- 3. It was really an ARC Break, not an SP and ARC Breaks should have been looked for instead of SPs.
- 4. The SP found was refused by the Auditor or Ethics.

The golden rule of S & D also applies - if it isn't the correct person or group that was "found" the good indicators won't come in.

So any incorrectly done S & D (as above) will not result in a pc bright-eyed and bushy tailed. All S & Ds correctly done on a pc that is PTS result in remarkable recoveries magical to see. So don't blame S & D if it "fails". Blame the lack of skill in using it and the person who ordered it or did it should be retrained.
