HCO BULLETIN OF 21 JANUARY 1966

SEARCH AND DISCOVERY
(ETHICS TYPE CASES, PTSs)

S & D ERRORS
(Handling PTSs with S & D)

When you have a failed Search and Discovery, the following are incorrect or have been omitted:

1. Incorrect ~~iter~~, errors in listing or assessment (over, or under listing, bad metering, poor question).
2. Person has not actually been made to disconnect from the SP by declaration in writing.
3. It was really an ARC Break, not an SP and ARC Breaks should have been looked for instead of SPs.
4. The SP found was refused by the Auditor or Ethics.

The golden rule of S & D also applies - If it isn't the correct person or group that was "found" the good indicators won't come in.

So any incorrectly done S&D (as above) will not result in a pc bright-eyed and bushy tailed. All S & Ds correctly done on a pc that is PTS result in remarkable recoveries magical to see. So don't blame S & D if it "fails". Blame the lack of skill in using it and the person who ordered it or did it should be retrained.
