S & Ds

There are three types of S & D (Search and Discovery).
These are used to nullify the influence of Suppressive persons
or things on a case so the person will be able to be processed
and will no longer be P.T.S. (a Potential Trouble Source).
People who are P.T.S. became that way because of suppression by
persons or objects. Insanity is also remediable by S & Ds
where the person can be processed.

These are all LISTING processes and if the auditor is
not well trained and good at the technology of listing, not only
will no good result occur but the pc (given a wrong item,
overlisted or underlisted, or audited over an ARC Break or PTP)
can be made ill.

Pcs who become ill are always to a greater or lesser
degree PTS.

These questions should not be shown to a pc as they may
start him self listing.

The "type" is determined by the 1st letter of the key
word in the listing question.

S & D TYPE U

"Who or what has attempted to unmock you?"

Where this does not communicate, use "Who or what has
tried to make nothing out of you?" A very bad off case may
respond best to "Who or what has unmocked you?"

This (above) is the standard and most used S & D.

S & D TYPE S

"Who or what are you trying to stop?"

This works on all cases to a greater or lesser degree.
It is particularly useful on a case that is giving a great deal
of trouble, gets small reads or is rather suppressive. This
should work on the insane also as the point where a θ^n (thetan)
becomes insane is the point where he begins to generally stop
things. I looked for years for the exact point where a θ^n
ceased to be sane and become insane on any given subject and
finally found that it was the exact moment he became dedicated
to trying to stop whatever it was.

S & D TYPE W

"Who or what are you trying to withdraw from?"

This is the action after a failure to stop has occurred.

In administering these, the best order would be Type W,
Type S and then Type U, if you are going to give them all to
the same pc in a row.

Any or all can be given to the same pc.

S & Ds can be given more than once to the same PC.

Properly listed the results are magical.   If they are not magical, then listing tech is badly out and should be re-studied from ALL materials and tapes on the subject.

Errors are located and repaired by the recent new L4A (HCOB of 9 January 1968).
