THE FIVE GAEs

The five Gross Auditing Errors (GAEs) are:

(1) Can't handle and read an E-Meter.

(2) Doesn't know and can't apply Technical data.

(3) Can't get and keep a pc in session.

(4) Can't complete an auditing cycle.

(5) Can't complete a repetitive auditing cycle.

These are the only errors one looks for in straightening up the auditing of an Auditor.

If you look for other reasons, this is itself a gross goof. There are no others.
