HCO BULLETIN OF 27 MAY 1969

EARLIER SIMILAR

Ron's development of modern Standard Dianetics very pointedly indicates that it is the body and its uncomfortable somatics which get addressed by the Dianetic Auditor.

Incidents as such get addressed only when erasing an earlier session or specific incident as in a Dianetic Auditing Assist.

As there appears some confusion as to the commands to be used and the word "similar", the following is hereby given:

ERASING A CHAIN WITH A SPECIFIC SOMATIC....going earlier:

"Is there an earlier incident containing a (somatic being run)".

ERASING INCIDENTS:

"LOCATE AN EARLIER SIMILAR INCIDENT".

Clay demonstrations done by the student will easily show what happens when the auditor who is supposed to be running a similar somatic chain gets the pc diving off into an incident chain.

A pc hurting his knee in a bus accident will, if sent to an earlier similar knee pain, find the exact engram being looked for.

If he gets sent to an earlier similar incident, he will go to the next earlier bus accident. And although this does not always occur with educated pc's, a raw meat will indeed move LITERALLY exactly to the earlier bus incident.

Be precise and exact in the commands used.
