Remimeo HCO BULLETIN OF 16 JUNE 1971R
Issue IV
(Corrected and Reissued)

(Reissued 16 July 1990 to clarify
who may deliver this rundown.
Addition not in script.)

C/S Series 37R

Addition 2R

LOW TA ASSESSING

(The rundown described in this bulletin may only be
delivered at the Flag Service Organization by auditors and
C/Ses specially trained and qualified to audit and C/S it.)

If after an apparent EP of a wide F/N on the last assessment,
the pc then has a low TA at the Examiner or subsequently has a low
TA, one must NOT start a new program as the existing one (37R) is
incomplete.

The correct C/S for an apparent 37R EP which then went sour
would be:

1. L4B Method 3 and handle.
2. Ask if there is another flow not yet touched. Note its
read as it is described and list it.
3. Reassess the existing and the additional flows for any
slightest slow or choke and list it.

Should there still be trouble with low or high TA subsequently,
it lies in the area of overts and withholds which blow loose on the
Continue process. This is true because overts and withholds add up
to stopping something which is discontinuance.

The next process (when all possible thoroughness has been
taken with 37R yet trouble of high or low TA persists) has not yet
been released.
