Remimeo HCO BULLETIN OF 16 JUNE 1971R  
ISSUE IV  
(Reissued as C/S Series 37R  
contained a misprint in the  
last para, therefore this  
revised and corrected issue.)

C/S Series 37R  
ADDITION N<sup>o</sup> 2R

LOW TA ASSESSING

If after an apparent EP of a wide F/N on the last assessment, the pc then has a low TA at the Examiner or subsequently has a low TA, one must NOT start a new program as the existing one (37R) is incomplete.

The correct C/S for an apparent 37R EP which then went sour would be

1. L4B Method 3 and handle.
2. Ask if there is another flow not yet touched. Note its read as it is described and list it.
3. Reassess the existing and the additional flows for any slightest slow or choke and list it.

Should there still be trouble with low or high TA subsequently, it lies in the area of overts and witholds which blow loose on the Continue process. This is true because overts and witholds add up to stopping something which is discontinuance.

The next process (when all possible thoroughness has been taken with 37R yet trouble of high or low TA persists) has not yet been released.
