Triple on all Drug Handling. Changes HCOB
5 July 71 C/S Series 49 Assists.)

QUADS CANCELLED

The disadvantages of Quad Dianetics outweigh any
advantages in actual practice.

Flow Zero is therefore cancelled as part of Dianetics
and lower grades.

This flow is self to self. It remains in use only in
37R where it is one of the 7 basic flows.

What happens when you use Flow Zero as an addition to
Flow 1 (another to self), Flow 2 (self to another), & Flow
3 (others to others) is that the pc now and then runs the
same chain twice, usually two Fls rather than an Fl and FO.

In the Interiorization Rundown, when Flow Zero is run
one is running a lie. A static cannot go into itself. It
can only appear to go into itself by calling other things
"self". Further, in the Int RD some pcs get into an implant
chain when they try to run FO and the TA goes up.

In getting in the fourth flow by rerun of singles and
triples (was called Quading for Quadruple or 4) a pc is
sometimes made to run a chain twice and this will send the
TA up.

Therefore, so as to simplify matters, do not run Flow
Zero self to self on any rundown except 37R.

REPAIR

The majority of cases benefitted from Quads.

Those that did not can easily be repaired by the use
of L3B, the Dianetic correction list.

In repairing an Interiorization Rundown it will almost
always be found that the Int RD was overrun in the first
place. Int RDs often go flat on Secondary F2 or even
Recall steps. By continuing to run all secondaries and
engrams and Flow Zero after the rundown flattened, for
example on Fl Engrams is to overrun the Interiorization
Rundown.

In making a repair of Int this is easily checked by asking if the Int RD was Overrun.

If this is found to be the case, one then <u>dates</u> the Int RD exactly. If it was overrun it will quickly F/N.

If it does <u>not</u> F/N, then it was never completed.

If it <u>does</u> F/N on the date, also have the pc point to where it was done (location) and it will F/N again.

If this doesn't work, one uses L3B on the Int RD.

Repairing any jam up in Quads is done by the use of L3B. To L3B one should add "Wrong flow?" when repairing Quad.

CANCELLATION

It was no overt to run Quad and has not ruined any cases.

But it is not easy to handle and can jam up and require repair. Thus its advantages are not great enough to continue it in use.

The same auditing time spent on other things will give more gain.
