OUT OF VALENCE

(OCA Graph)

On OCA graphs (the plotted test score of a po) you find sometimes a case that read high on the graph will drop and read lower after auditing.

This is caused by the fact that the person was OUT OF VALENCE in the first place.

Social machinery was what the first registered.

Now after auditing the graph expresses something closer to the actual being even though it dropped.

We have known about this since '57 or '58 but I do not think it was fully written up. Further, we now know MORE about it.

If you look into Suppressive Person tech you will find an SP has to be out of valence to be SP. He does not know that he is because he is himself in a non-self valence. He is "somebody else" and is denying that he himself exists, which is to say denying himself as a self.

Now this doesn't mean all persons whose graphs dropped were active SPs. But it does mean they weren't being themselves.

After some auditing they became themselves somewhat and this self isn't the social cheery self the first graph said.

But the dropped graph is nearer truth.

Now, how to get the graph UP again?

The person with the dropped graph is closer to being himself but is not yet fully restored, not yet fully into his "own valence".

While Class XI would handle this a bit differently, Class VIII rundown already has an answer.

The Class VIII out of valence lists LX1 LX2 and LX3 and the Recall, secondary and engram triples for each assessed item from these lists is a way to handle.

Completing any cycle the pc is on is of course fundamental. And even if the pc goes on to next grade the graph will improve.

The fact is that the pc is emerging more and more and becoming himself and then he himself begins to gain.

The graph that dives will come back up if general processing is done.

The pc will keep saying he is "more there". And it is true.
