Remimeo HCO BULLETIN OF 23 JULY, 1971

(Corrected in Script Page 2, 4 May 1972)

(Revises and replaces HCOB 15 Mar 71
of same title)

ASSISTS

A FLAG EXPERTISE SUBJECT

(Commands are the only change)

For a pc being run on a Touch Assist for handling something around the head (for example: teeth), go further even to the toes as the area extends through the nerve channel to the whole body. Right - left and also whole body. A head somatic also sticks in the spine.

Assist EP

All Assists are run to cognition and should F/N VGI at the Examiner.

Injury Rundown

On an injury, after the Touch Assist, a Contact Assist and then an LlC on the injured member could be done. Usual Dianetic actions would follow as necessary.

Pc Running a Temperature

COMMANDS CORRECTED FROM EARLIER ISSUE.

A persistent temperature can be brought down by running the pc on Objective "Hold it still".

This can be run on a two command basis.

VERSION A

For a pc running a temperature too ill for regular auditing, he should be given antibiotics and an assist type boost, not a major action like Dianetics.

This version would be run if the pc is far too ill to get up. The pc is run on a meter to cog F/N VGIs.

1. 2 command Repetitive Process alternate commands:

- a. Look around here and find something.
- b. Hold it still (until pc can or feels he can).

Then (a) again.

Then (b) again, etc.

This will drop a fever.

2. 2 WC How do you feel? Have you felt like this before?
Earlier Similar to FN VGIs.

VERSION A is NOT very lasting. It is for very ill pcs
and very high temperatures.

VERSION B

This is true objective "Hold it still" and is very
lasting.

It is done on a pc who can, even with effort, walk around
a room.

It is done OFF the meter to Cog, GIs. The pc then should
at once be put on the meter and will be found to have an F/N.
If no F/N on the meter the process is either (a) unflat or (b)
overrun. If unflat it is continued, flattened off the meter
and the same meter test follows. If overrun the release point
is rehabbed.

VERSION B Commands are:

- (a) Look around here and find something.
- (b) Walk over to it.
- (c) With your hands, hold it still.

The three commands are given in (a) (b) (c) sequence one
after the other, the pc executing each command and being
acknowledged until the pc has a cognition and GIs. He is then
checked on the meter.

A thermometer can be used to check temperature after the
meter check for F/N. The temperature will be found to have
subsided.

Both A and B versions can be used on the same pc.

Let us say on Monday, A Version is used. Then on Tuesday
if temperature has gone back up but pc is better B Version is
then used.

The temperature process is most effective on a low order
persistent fever that goes on and on for days and even weeks.
In such cases Version B would be used and the temperature would
come down and stay down very nicely.
