ISSUE III

RISING SCALE PROCESSING

Refer PAB No. 235 CCH 15.

HCOB 11 June 57 Training & CCH Processes - CCH 15.

The scale used in Rising Scale Processing is taken from the Chart of Attitudes, the bottom and top buttons being employed in the process.

The scale is:

SURVIVE	RIGHT	FULLY RESPONSIBLE
DEAD	WRONG	NO RESPONSIBILITY
OWNS ALL	EVERYONE	ALWAYS
OWNS NOTHING	NOBODY	NEVER
MOTION SOURCE	TRUTH	FAITH
STOPPED	HALLUCINATION	DISTRUST
I KNOW	CAUSE	I AM
I KNOW NOT	EFFECT	I AM NOT

The process drills the pc in changing his mind and demonstrates to him that he can maintain higher levels of certainty and that he can alter his considerations.

The commands are:

- (1) "Get the idea of (bottom of scale, e.g. dead)".
- (2) "Do you have that idea".
- (3) "Alright. Now change that idea as nearly as you can to (top of scale, e.g. survive)".
- (4) "OK. How close did you come".
- (5) "Thank you".

These commands are run repetitively 1-5, 1-5, 1-5 on the same pair (e.g. dead - survive) until the end phenomena of F/N, Cog, VGIs on the pair being run is reached.

Example (pair dead - survive)

- (1) Commands for the pair are cleared.
- (2) Commands are run 1-5, 1-5, 1-5, 1-5 F/N, Cog (e.g. "Gosh I'm going to survive") VGIs.
- (3) Commands with next pair (wrong - right) are cleared.

- (4) Commands are run 1-5, 1-5 to F/N, Cog, VGIs on that pair, and so on until all twelve pairs have each been run to F/N, Cog, VGIs which gives twelve F/Ns on the process.

Note: All twelve pairs are run each to its own E/P. One never runs a few pairs and leaves it there. Once Rising Scale is started, all twelve pairs must be run.

---

Rising Scale processing incidentally changes the pc's glandular structure for the better, the body is relieved of glandular malfunction.
