CenOCon            HCO POLICY LETTER OF 27 OCTOBER 1969  
Dir. Mat.            (Reissue of HCO Policy Letter of  
D of T                August 2, 1962)

URGENT  
TRAINING AIDS

RE-INTRODUCED FOR DIANETICS BY ORDER OF LRH

Due to the great success and revelatory nature of the TV Demonstration set up at Saint Hill, a smaller edition of this training aid is ordered installed in every Central Organization.

The set up consists of one TV Camera, one TV set (21 or 23 inch), a microphone, an amplifier and the required cable.

The TV camera (such as the Grundig) is equipt with a four inch lens. It is mounted in a corner high and to the right behind the auditor (about seven feet from the floor). An E-Meter, erected on its tipped back, is placed firmly in a bed in the centre of a table. The face of the E-Meter is then perpendicular to the camera.

The Auditor sits at the table, the camera "looking over his right shoulder" at the E-Meter.

The preclear sits at the table across from the Auditor in the usual position.

The microphone is placed under the "tent" made by the E-Meter.

There is no picture made of Auditor and preclear, only a picture of the E-Meter.

The set up is placed in any oversize auditing room in the org. and usual auditing can go on in that room when the set up is not in use, or it is placed at a separate table, otherwise unused, in the D of P's office.

The TV picture of the meter and the sound from the amplifier are led by cables to the front of the usual assembly hall of the organization.

The TV set is placed on a very high stand so as to give everyone in the room an unobstructed view of the screen.

The sound is connected to the speakers in the set itself, there is no separate speaker.

This is used for demonstrations by Sthil graduates, and for student demonstrations to reveal to all their skill in meter reading or lack of it in an actual session.

No session before an audience is valid or natural and this arrangement gives privacy for the session but full display of the two important points of a session - sound and meter. It will be a shock to both Ds of P and Ds of T to see what is passing for meter reading, and a great help in training HGC Auditors and students.

The TV picture of the meter crowds in only part of the TA and sensitivity knob and all but a bit of the right side of the meter dial. The meter must fill the screen.

The cost will be under £500 or \$1200. The reward in technical cannot be measured. A second camera and TV set which gives a side view of auditor and pc is nice but is optional.

Use electronic friends of the org or commercial firms to install. But make it a neat, compact, trouble free installation with no loose wires about.

An intercomm 'phone from assembly room to auditing room is nice to have.

Do it sooner.
