Org Series 1

BASIC ORGANIZATION

What is Organization?

Most people have so many associated ideas with the word "Organization" that they think of one as an identity or a being, not as a dynamic activity.

Let's see what one really is.

Let us take a pile of red, white and blue beads. Let's organize them.

Now let us draw the org board.

Let us dump them all on top of In Charge, all mixed up in a confusion.

Obviously In Charge must *route* them to dig himself out. So we get

Thus we find out much of what an In Charge does. He routes. He separates into types or classes of thing or action.

This so far is a motionless org.

We have to have products. Let's say its products are drilled beads, strung beads, boxed beads.

We would get

Or we would get

Or we would get

It is not particularly important which pattern of org board we use so long as it handles the volume of beads.

If we only have 1 person in this "org" he would still have to have some idea of organization and a sort of org board.

If we have any volume to handle we have to add people. If we add them without an org board we will also add confusion. The organization without an org board will break down by overload and cross flows and currents. These in conflict become confusion.

All a confusion is is unpatterned flow. The particles collide, bounce off each other and stay IN the area. Thus there is no product as to have a *product* something must flow OUT.

We can now note two things. We have some stable items. These are posts or locations. And we have flow items. There are things undergoing change.

So an org's positions change flowing particles.

Particles flow *in sequence*.

Things enter an org, get changed, flow out of an org.

An org with one type of item only (red beads) is less complex than one with several types of items.

Any activity has a *sequence* of actions. It has to have stable points which do *not* flow in order to handle things which do flow.

It is not necessary to have a stable terminal do only one thing. But if so then it also has a correct sequence of actions.

All this is true of an engine room or a lawyer's office or any organization.

In an engine room fuel flows in and is changed to motion which flows out. Somebody runs the machines. Somebody repairs the machines. It may all be done by one person but as soon as volume goes up one has to plan out the actions, classify them and put them on an org board which the people there know and abide by or the place will not operate well.

This is done by dividing operation and repair into two actions, making two activities on the same org bd.

The Chief keeps the flows going and the terminals performing their actions.

In a lawyer's office we get different actions as a flow.

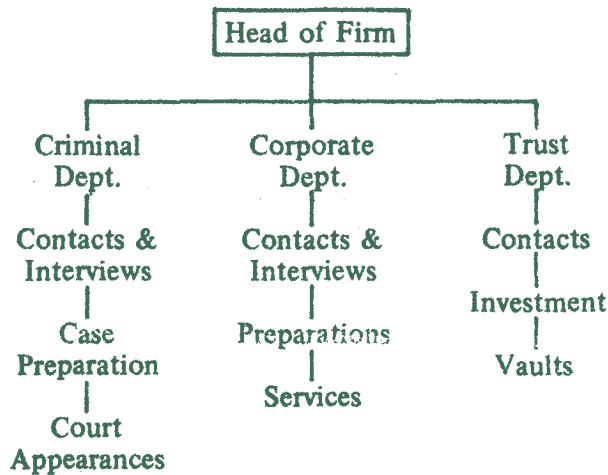

Would be a flow pattern, possibly with a different person (with a different skill) on each point.

Or we could have a sort of motionless org board.

But if we did that we would have to put the motion in vertically so that flow would occur.

Org boards which only give terminals usually will not flow.

A typical Army org board of yesteryear was

When they got into a lot more men they had to have a *flow* board.

So one *organizes* by

1. Surveying the types of particles.
2. Working out the changes desired for each to make a product.
3. Posting the terminals who will do the changing along the sequence of changes.

The board also must include a *recognition* of the types in 'A' which *routes* the types to the *terminals* who *change* them and to a further *routing out* as *products*.

To be practical an org board must also provide for pulling in the materials disposing of the product and being paid for the cycle of action and its supervision.

A company has various actions.

It is essentially a collection of small org boards combined to operate together as a large org board.

The basic principles you have to know to organize anything are contained in this policy letter.

To plan out *any* action one has to be able to visualize its sequence of flows and the changes that occur at each point. One has to be able to see where a particle (paper, body, money) comes in and where it leaves.

One has to be able to spot any point it will halt and mend that part of the flow or handle it.

A proper org board is a perpetual combination of flows which do not collide with one another and which do enter and do experience the desired change and which do leave as a product.
