HCO POLICY LETTER OF 18 MARCH 1977-1R
Remimeo ADDITION OF 20 MARCH 1977
REVISED 14 JUNE 1977

Data Series 43-1R

EVALUATION SUCCESS

To show that evals on individual orgs and getting pro-
grams done DOES raise stats the following brief review is
published:

Around mid-July I got on the eval approval lines for
about a week and had orgs of one Continent evaluated by some
Flag Evaluators.

We got several evals through, severely according to the
Data Series rules.

Here are the results of 7 of them.

1. Program was reported fully done. Stats went up.

2. 18 July eval. Pgm was almost fully done. Finance
got bugged. Org crashed 22 August 74.

3. 22 July eval. By 15 Aug stats had gone UP.

4. 21 July 74 eval but not started on until 26 Sept
74 as Study Manuals were delayed on which eval depended.
Org stats after eval began to be done went UP and by the
end of Oct hit HE almost across the boards.

5. 20 July 74 eval. Started on 10 Aug 74. Half done.
By 24 Oct stats went UP.

6. 23 July 74 issue. Bugged. Not completed. Stats
went up first couple weeks. Org crashed 24 Oct 74.
(Eval was also cross-ordered by removal of CO.)

7. 23 July 74. Three-quarters done. Stats went UP.

Thus 5 out of 7 of the above evals were successful.

The two that failed were obviously insufficiently broad
as other matters got in the way of them. The evaluator could
not have had the real situation. Means not enough preliminary
work to find the area that should have been evaluated.

VERBAL TECH

Verbal Tech on a DSEC should be severely handled if
found.

Note that the evals as above were very purely supervised
referring only to departures from the Data Series P/Ls.

Pure eval per Data Series 33R was the push on getting
the evals done. I was simply demanding full Data Series P/L
application.

The reason for Verbal Tech is Mis-U words!

FAILING EVALS

It is pretty easy to tell if an eval is getting done or
if it is failing. The two poor evals in the 7 just weren't
watched fast enough by the evaluators. You cancel a failing
eval fast and do a better one.

Failing to cancel or redo a failing eval on an org would
be the real reason for that org continuing to go down.

SUMMARY

If you got 5/7ths of all our orgs purely evaluated, no
nonsense with verbal tech, you would have booming Int stats!

Just like pcs - unprogrammed pcs fail - and pcs audited
with hearsay tech fail! Orgs without evaluated pushed pro-
grams for that org tend to fail. And evaluations done on
hearsay tech are a waste of paper.

How about it?

A boom or crash?

It's up to YOU.
